

Your Safety Is Our #1 Priority

We know you might be wondering if it's safe to visit our practice. Here are 10 things we're doing to make sure that it is:

- 1 We take every staff member's temperature before opening for business every morning and send them home if their temperature is high.**

- 2 We take every patient's temperature as soon as they enter our office and have them reschedule if their temperature is high.**

- 3 We keep our appointments spaced apart and ask patients to not show up early in order to reduce your odds of coming into contact with other patients.**

- 4 We enforce social distancing wherever possible.**

- 5 We make sure personal protective equipment is being used as appropriate for the procedures performed.**

6 We wear new gloves for every patient and an appropriate mask for every procedure.

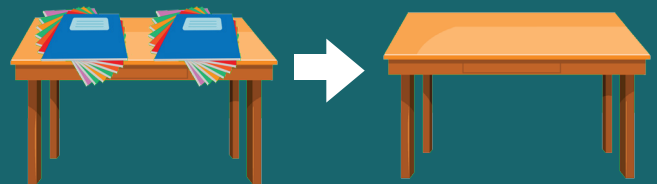

7 When performing procedures, we use **protective devices and protocols** whenever possible to decrease your potential exposure to infectious agents.

8 We use **effective infection control procedures**, such as autoclaving, to thoroughly clean and sanitize our hand-pieces and instruments after every use.

9 We **clean and disinfect public areas frequently**, including door handles, chairs, counters, and bathrooms.

10 We've removed **magazines, reading materials, and other items** that are difficult to disinfect after being touched.

WE HOPE TO SEE YOU SOON!
